Re: Software Engineer III — Fullstack Java with React (Requisition 350349), AI & Engineering, Engineering as a Service

Hi Deloitte team,

I've spent 12 years building Java and Spring Boot systems and the React frontends on top of them, which is the shape of this role. At Philips I refactored an Apache Camel integration into a Spring Boot microservice, improving API efficiency by 98%, and cut dashboard load time by 70% with a Kafka → S3 redesign. I secured those services with Spring Security and OAuth2, and tested at every layer with JUnit, Jest, React Testing Library and Playwright. As a freelance solutions architect for Growlogic, I worked directly with the founder to turn business needs into a 6-service platform on Azure AKS, which is the client-facing delivery your Engineering as a Service team describes. I'd welcome the chance to bring that to your client programs from Bangalore.

Best regards,
Siddhant Rangari
