Re: Senior Backend Software Engineer, Payments (JR020437), Copenhagen

Hi Spirii team,

Turning usage data into correct money movements is the part of backend work I enjoy most. At MyAgentFirm I built an atomic credit ledger in Node.js and PostgreSQL across 11 pricing tiers, where every debit and refund runs in one transaction, failed jobs trigger a compensating refund, and every movement is audited, with zero double-spend. I ran its workloads on a PostgreSQL job queue and later RabbitMQ, and at Philips I built Kafka pipelines on AWS and cut incident resolution time by 30–40% with better observability. I would bring that discipline, plus daily use of AI coding assistants with careful review, to your payments platform.

I am based in Bangalore and ready to relocate to Copenhagen. I would need work permit sponsorship and am happy to discuss timing.

Best regards,
Siddhant Rangari
